How to list and then compare the NB predictions from RapidMiner and R in Excel
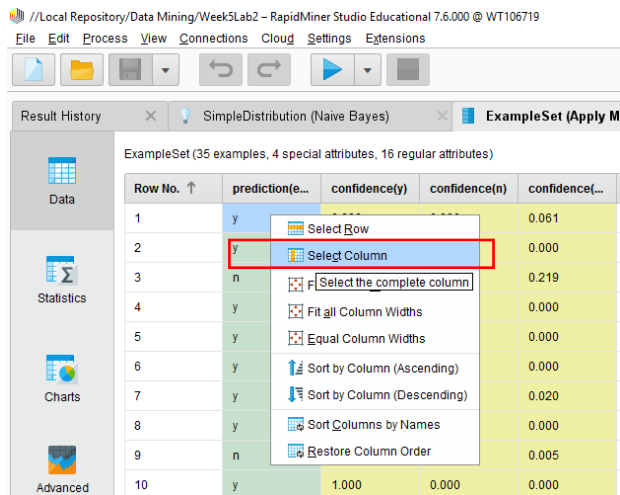

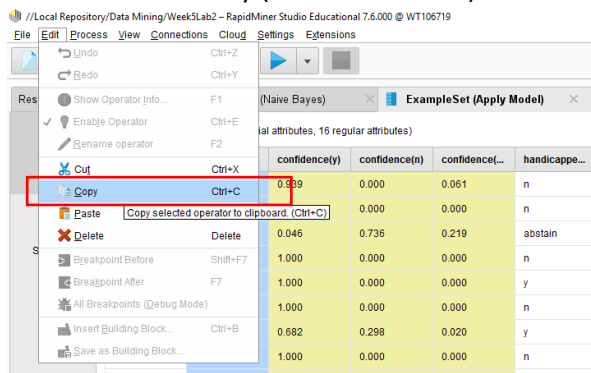

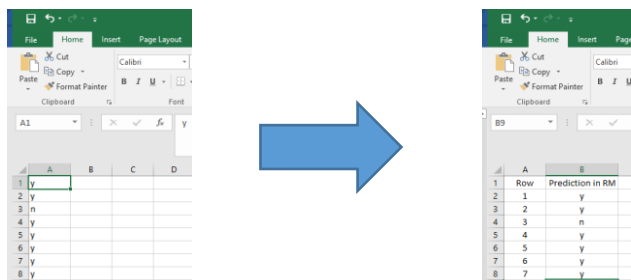

1. Copy the prediction result from RapidMiner to Excel
   1.1. Select one cell in the column you want to copy and right click
   1.2. Choose select Column

   1.3. Use the shortcut key (Control + C in PC) or click Edit and then choose Copy

   1.4. Paste the column in your Excel file (see the left). I encourage you to add a column named row and a row as column name (see the right).
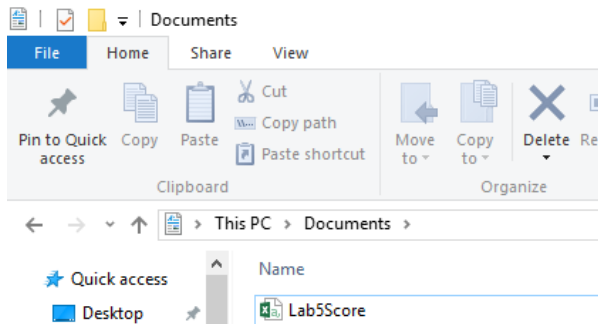

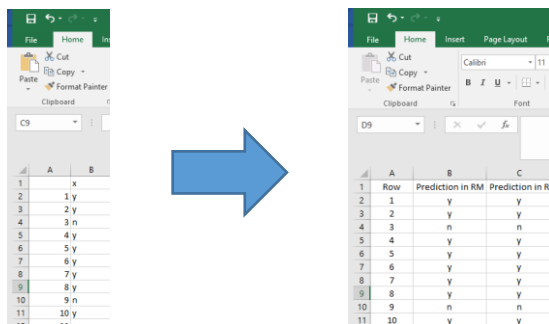

2. Copy the prediction result from R to Excel
   2.1. Write the prediction result into a csv file using the following command.

```
> write.csv(Lab5Score,file="Lab5Score.csv")
>
```

   2.2. Find the file in your local computer (typically, it is saved in your Documents).

   2.3. Open it in Excel and then merge the two excel files into one

3. Compare the prediction results using the following function.
